

ABSTRACT

1
2 A pressure-sensitive tape substrate is coated with an
3 adhesive, and the adhesive is then printed with an ink or the
4 like that acts as an adhesive-inhibiting masking or barrier
5 along one or more continuous zones or lines. Tapes are formed
6 in whole or in part by slitting along the continuous line or
7 lines so defined. The technique is used to make transfer
8 tapes, diaper fastener tabs, and other products.
